

I.S. Machines

Our machine building programme started in the late 1970's. Since then we have supplied new and remanufactured machines to major customers in the UK and throughout the world.

Our independence allows us to provide a high level of customisation giving you, the customer, exactly what you want for your production lines. This means that you can take the best technologies available and combine them to give an optimum solution.

Our machines can also be tailored to your exact requirements for example for tall ware production, specialist vacuum flask production and specific valve requirements. All machines are capable of the standard production processes such as press and blow, blow and blow and narrow neck press and blow.

Machine Build Capability:

- Single section upwards
- 4-1/4", 5", 5-1/2", 6-1/4" centres
- Type EF
- Single, double, triple gob
- Any electronic timing system
- Any electronic drive system
- Any servo system
- Advanced Forming Package
- Full process capability - BB, PB, NNPB

I.S. Machines

Features and Benefits:

- Machines built to exact customer requirements.
- *No need to make compromises to fit into a manufacturer's standard scope of supply*
- Scope of supply can range from the machine to a complete turnkey package
- *ISM can act as a one stop solution for the production of glass containers*
- Tailored machines supplied for special production needs
- *No need to modify a standard machine in house*
- Extensive experience with all major machine manufacturers.
- *Our machine can be tailored to fit into your plant and use your standard*
- Advanced Forming Package for the blank and mould side
- *Improves machine performance and control by placing controls on the section*
- ISM Piping Concept removes the valves from the machine to manifolds under the operator platforms
- *Reduces clutter on the machine, reduces risk of damage and makes setup and servicing easier*
